EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with John Kacvinsky on 21 November 2006.

The application has been amended as follows:

Claim 5 is amended to read:

A method comprising:

detecting an event related to a first network interface;

querying a second network interface to determine if the second network interface requires servicing;

waking a host processor in response to the detected event;

servicing the first network interface and the second network interface in response to the detecting;

wherein the servicing comprises servicing the first network interface and the second network interface during a same wake session in response to the detecting.

Claim 8 is amended to read:

The method of claim 5 wherein the servicing comprises servicing the host processor detecting a timer event related to servicing the first network interface.

Claim 9 is cancelled.

Claim 10 is amended to read:

The method of claim 5 and further comprising:

placing the host processor in a power saving state prior to detecting the event; and
returning the host processor to the power saving state after servicing the first and
second network interfaces.

Claim 11 is amended to read:

A method in a system having multiple network interfaces, the method comprising:
detecting an event related to a first network interface;
detecting an event related to a second network interface;
querying any one of the first and second network interfaces to determine if any one of
the first and second network interfaces require servicing;
waking a processor in response to the detecting of an event;
notifying the processor of the events for the first and second network interfaces;
servicing the events for both the first and second network interfaces in response to the
notifying;
wherein the servicing comprises servicing the first network interface and the second
network interface during a same wake session in response to the detecting of an event related
to a first network interface or a second network interface.

Claim 12 is amended to read:

The method of claim 11 wherein the notifying comprises sending an interrupt to the processor.

Claim 15 is amended to read:

An apparatus comprising:
a host processor;
at least two network interfaces coupled to the host processor; and
an interface coordinator adapted to coordinate servicing of the at least two network interfaces upon detection of an event related to a first network interface, the interface coordinator to query a second network interface to determine if the second network interface requires servicing;
wherein the host processor is awakened in response to the detected event; and
wherein servicing comprises servicing the first network interface and the second network interface during a same wake session in response to the detecting.

Claim 16 is amended to read:

The apparatus of claim 15 wherein:

the first network interface is in communication with a first wireless network; and
the second network interface is in communication with a second wireless network.

Claim 19 is amended to read:

The apparatus of claim 15 wherein the first network interface is in communication with a wired network, and the second network interface is in communication with a wireless network.

Art Unit: 2115
